Contribution Statement

Computational Neuroscience Project

Nathan Le Roux (2717495) & **Tafara Chibanda (2683459)**

Tafara focused on the independent JAX implementation, the spatial-scale reproduction, matched-seed diagnostic experiments, the shared-equation comparison, and the sampling-calibration control.

Nathan focused on the independent NumPy implementation, parameter sweeps, ablations, and analysis of grid geometry and modules.

The joint review compares these results while keeping the two implementations and their numerical choices explicit. AI assistance is disclosed in the review and accompanying declaration materials.
